Electro-Voice **PHASE LOADING**

**EXCITING NEW SPEAKER SYSTEM
ACHIEVEMENT... For Superior,
In-Phase Bass Response from
Along-the-Wall Speaker Enclosures**

Unlike treble and mid-range tones, which are directional, bass tones are non-directional and ordinarily travel along two routes on the way to your ears—resulting in partial cancellation. One portion of a bass tone travels directly to your ears from the woofer, while another portion of the same tone travels first to the wall in back of the woofer, and then is reflected to your ears. Since the sound taking this second route travels further, it reaches you *later* than the sound that comes directly from the woofer—it is out of phase. "Phase Loading" corrects this bass-cancelling time lag by using a specially designed woofer in a sealed cavity, *facing the wall*. With this unique arrangement, *all of the bass is "bounced" back from the wall at the same time—and is in phase*. You hear *the entire audio spectrum* in phase, the bass tones plus the mid-range and treble. With "Phase Loading", the bass tones are augmented by 3 times—and you can place the enclosure *anywhere* along the reflecting wall.

HERE IS HOW IT WORKS

Two-way mid-range sound comes from MT30B horn; treble from T35B tweeter.

15BWK woofer "bounces" bass tones directly off reflecting wall.

THIS IS A BASIC HI-FI PHONO SYSTEM

THE AMPLIFIER

The amplifier is the "heart" of a high-fidelity music system. It "builds up" or amplifies the very small voltages which are fed into it by the phono cartridge, tape deck, or radio tuner, into electrical energy sufficient to operate the speaker. A hi-fi amplifier does this with maximum fidelity.

THE SPEAKER AND SPEAKER ENCLOSURE

The actual sound-reproducing unit. The speaker converts the electrical energy received from the amplifier into sound waves which are radiated from its cone. A proper enclosure, the "other half" of a speaker, is a vital factor in good tonal reproduction.

THE RECORD CHANGER AND CARTRIDGE

The turntable of a record changer or player "spins" the record. The pick-up arm contains a cartridge with a needle (stylus). The needle follows the record grooves, and the cartridge converts the side-to-side movements of the needle into small voltages which are then fed into the amplifier.

ADD THESE COMPONENTS NOW OR LATER

RADIO TUNER. Performs the same function as your radio but does not contain an amplifier or speaker. It simply "tunes in" the radio signal and feeds it through the amplifier and speaker of your hi-fi system.

TWEETER AND CROSSOVER NETWORK. A tweeter or high-frequency speaker, can be added to your single speaker system. The crossover network sends the right frequency to the proper speaker.

TAPE DECK. Most hi-fi amplifiers have an input for a tape recorder or deck. A tape deck allows you to play your own tape recordings or commercially recorded tape through your hi-fi system.

STEREO. By using a two-channel sound source, such as a stereo tape deck, plus two amplifiers and two speakers, you will be able to enjoy breathtaking 3-D stereophonic sound. You can start out with stereo—or add the tape deck, extra amplifier and extra speaker whenever you wish.

Enjoy a Whole New World of Sound with Allied Hi-Fi

whether you're an audio expert or new to Hi-Fi...

SPEAKER CABLE

YOU GET PRE-SET STYLUS PRESSURE

The stylus pressure of the turntable or record changer arm is always carefully pre-set by Allied's technicians to assure optimum performance—there are no adjustments to make when you receive your system.

YOU GET A FREE RECORD CHANGER COVER

Made of durable vinylite plastic, and attractively styled in a silver-gray color, this valuable accessory helps protect your record changer or player from the harmful effects of dust and moisture.

YOU GET FREE VALUABLE BOOKLETS

Two highly informative and easy-to-understand booklets are included at no extra cost with every Allied hi-fi system. Both are written by our own audio experts and contain a wealth of valuable information.

YOU GET SUBSTITUTION PRIVILEGES

You may replace any *one* component used in any Allied hi-fi system, with another one of your own selection; just add or subtract the difference in catalog price. In addition, stylus and cartridge may also be substituted.

ALLIED'S ADVANCED **knight**® HI-FI

BUILT TO ALLIED'S OWN SPECIFICATIONS TO SAVE YOU MONEY

Knight high-fidelity components are created and designed by Allied and laboratory-checked to confirm that they meet our rigid specifications—and the critical demands of music lovers. *All Knight hi-fi units are unconditionally guaranteed for one year.* For economy and highest quality, Knight equipment leads the field, giving you top performance at lowest cost.

NEWEST FEATURES FOR TRUE HI-FI PERFORMANCE

"A-B" SPEAKER SWITCH

This convenient control on the front panel of the amplifier enables you to switch either your main speaker system, or an extension speaker, on or off, or to play both speakers together.

RUMBLE AND SCRATCH FILTERS

These switches provide you with ultimate control of recorded or broadcast defects with a minimum loss of musical quality; old, worn records become playable!

VARIABLE LOUDNESS CONTROL

At low volume levels, the human ear is less sensitive to the lowest and highest frequencies; the loudness control compensates for this insensitivity.

TOP FLEXIBILITY

You can use your Knight 30-watt amplifier with a tape deck, complete tape recorder, phono playback units, FM or AM tuner, for hi-fi TV sound, and other applications.

New features—new styling—higher output power, combine to make the new Knight Deluxe 30-watt amplifier the year's outstanding high-fidelity value! It is the finest amplifier in the Knight line, matched in quality, and case and color styling, to the Deluxe FM-AM tuner on the opposite page.

The Knight 30-watt amplifier offers the flexibility necessary to meet the needs of any high-fidelity music system. The new "A-B" speaker selector switch provides for independent playback through either or both of two speaker systems. Equalization controls correct both magnetic and ceramic cartridge inputs. Variable damping permits exact matching of amplifier to any speaker system, while new 6CA7 output tubes provide greater power output at exceptionally low distortion levels; new circuitry prevents overload automatically.

SPECIFICATIONS: All measurements at full 30 watts output. *Frequency Response:* ± 0.5 db, from 20 to 40,000 cps. *Harmonic Distortion:* 0.5% at mid-frequencies; never exceeds 1.5% from 30 to 20,000 cps. *Intermodulation:* less than 2% at full rated output. *Hum Level:* 80 db below full output. *Sensitivity (Input required for full output):* 4 mv at Tape Head input; 8 mv at Mag Phono input.

The hi-fi event of the year! Allied's own 3-way high-fidelity speakers, designed and manufactured to the strictest audio specifications, and brought to you at an outstandingly low price. These speakers are of the new 3-way design, and have a large cone for low frequency reproduction, a specially constructed conical radiator for mid-frequencies, and a built-in compression tweeter for high-frequencies. An L-pad level control, pre-wired to the speakers with a 30" cable, lets you adjust high-frequency response to satisfy personal listening tastes and match room acoustics. Amplifier output wires connect to binding posts on the speaker frame—no soldering is necessary.

Heavy, 1 3/4-pound magnet insures effective reproduction of even the most thunderous bass passages. The rigid frame used in the Knight 3-way prevents rattling and distortion. A mechanical crossover separates bass from mid-range at 2000 cps; an electrical crossover smooths the transition from mid-range cone to tweeter at 4000 cps. These speakers are ideal for use in the Klipsch-designed Knight corner enclosures.

ELECTRO-VOICE HI-FI SPEAKERS AND WOOFERS

Three-Way Speakers

Employ three concentrically mounted sections—Super-Sonax VHF driver, Radax propagator, and large bass cone with heavy magnet, for a superb standard of performance. TRX 3-way speakers deliver vibrant bass, full-bodied mid-range response and ultra-clean treble. Feature concentric mounting of all elements for wide-angle dispersion; adjustable high-frequency level control; electrical crossover network. Edge-wise-wound voice coil design provides 18% more efficiency and lower transient distortion. Excellent for use in custom high-fidelity installations or for modernization of existing systems. All are 16-ohm impedance.

MODEL 15TRX. Electro-Voice's finest 3-way speaker. Custom-engineered in every detail to reproduce with a startling degree of realism. Uses extra-large 5½ lb. magnet for minimum transient distortion and remarkably clean and distinct bass. Consists of Radax-type 15" speaker with "Whizzer" high-frequency propagator; concentrically mounted T-35 "Super-Sonax" very-high-frequency tweeter; X-36 half-section, constant K crossover network; and the AT-37 HF level control. Uses 2½" aluminum voice coil. Frequencies above 3500 cps are distributed to "Super-Sonax" tweeter by the X-36 crossover network. AT-37 level control adjusts tweeter output. Response, ±3½ db, 30-19,000 cps (in Regency or Empire enclosure). Resonance, 35-45 cps. Capacity, 30 watts. Depth behind panel, 9¼". 16 ohms. Shpg. wt., 48 lbs.

Low-Frequency Woofers

Featured in E-V speaker systems; all have unusually low cone resonance. Can also be used as woofers in custom 2 and 3-way sound systems. All woofers in this listing are rated at 20-40 watts. Compliance of outer cone rolls and inner spider carefully calculated for maximum extended bass range response. Cones are treated for moisture and fungus resistance. Heavy Alnico V magnets. 15WK, 15BWK and 18WK woofers are recommended for "K" horn and phase-loaded systems only; require sealed cavity behind the driver. *Have 3.2 ohms DC resistance; all others, 16 ohms impedance.

Radax Speakers

Radax principle provides highly efficient and economical method of using two concentrically mounted cones operating from single voice coil. Built-in mechanical crossover from low-frequency cone to high-frequency propagator permits design of each cone for optimum response.

MODEL SP15. Deluxe 15" Radax speaker with special 125 sq. in. bass cone and 2½" aluminum voice coil. Provides exceptionally fine bass, mid-range and treble reproduction. Excellent for custom home music systems. Heavy 5½ lb. Alnico V magnet for unusually good damping—superb transient response and remarkably distinct bass. Resonance of bass cone, 35-45 cps. Bass cone is directly coupled to "Whizzer" HF radiator. Insures 100° treble dispersion. Frequency response, ±5 db, 30-13,000 cps. Rated, 30 watts. 16 ohms. Crossover, 3000 cps. NEW ELECTRO-VOICE PHASE-LOADED ENCLOSURES

A radical departure from conventional speaker enclosure design, E-V's new "Phase-Loaded" enclosures employ a unique acoustic principle to overcome the non-directional characteristic of bass sound. Unlike treble and mid-range tones, which are directional, bass tones are non-directional and ordinarily travel along two routes on the way to your ears—resulting in partial cancellation. One portion of a bass tone goes directly to your ears from the woofer, while another portion of the same tone travels first to the wall in back of the woofer, and is then reflected to your ears. Since the sound taking this second route travels further, it reaches you later than the sound that comes directly from the woofer—it is out of phase. "Phase-Loading" corrects this bass-cancelling time lag by using a specially designed woofer, placed low in a sealed cavity, facing the wall. With this unique arrangement, all of the bass is "bounced" back from the wall at the same time, and in phase with mid-range and treble tones—you hear a perfectly balanced audio spectrum! With "Phase-Loading", not only are bass tones augmented by 3 times, but you can place the enclosure anywhere along the reflecting wall.

Electro-Voice Speaker Enclosures & Kits

Complete kits for construction of famous Electro-Voice folded-horn speaker enclosures. Economical and easy to assemble, each kit includes clearly written, step-by-step instruction manuals. All lumber parts are cut to exact size on the same precision factory machinery which is used to manufacture completed Electro-Voice cabinets. All exterior surfaces of the enclosure kits are made of clear-grained birch, ready for finishing in the color of your choice. Finishing kits, for obtaining a professional furniture finish, are listed below. Grille cloth, glue, screws and nails are included; less metal trim (see below) and driver components (see pages 48 and 49).

Finished and completely assembled enclosures, also listed in the table below, have approximately the same dimensions as the complete speaker systems shown on pages 46-47. The Regency can be used in a corner or against the wall and accepts 12" or 15" speakers, and 2 and 3-way systems. The assembled Empire accepts phase-loaded and conventional systems, with 12" and 15" speakers—Empire kit is folded horn only. Aristocrat corner enclosure takes any 12" speaker, or Electro-Voice's 2 and 3-way systems. The Baronet accepts Electro-Voice or any other 8" speaker and is designed for corner placement.

HIGH FIDELITY SPEAKERS

Top-quality hi-fi speakers, famous for their authentic reproduction of sound

3-Way Diffaxial Series

UNIVERSITY'S DIFFAXIAL DESIGN. Most of the speakers listed below employ University's famous Diffaxial design. This feature assures outstanding tonal balance by providing exceptionally smooth, wide-angle dispersion of treble frequencies. These frequencies are normally projected straight ahead by the loudspeaker; as a result, they are not heard at the proper volume at all points in the room. However, University's Diffaxial speakers overcome this problem by using a special diffusing-type cone (Diffusicone) at the apex of the main cone. The Diffusicone disperses the treble frequencies to provide extremely even distribution throughout the listening area.

MODEL 315-C SUPER 15" DIFFAXIAL. New, greatly improved version of earlier 315. Woofer cone features high excursion, dual-spider piston and anti-breakup, low-resonance diaphragm, for rich natural bass. Multi-element Diffusicone mid-range section, crosses over at 1000 cps. Treble is covered by new, heavy-duty T-50 Hypersonic driver and axially mounted, wide-angle tweeter horn. Response is 25 cps to inaudibility. Includes balance control with tweeter adjustment. Magnet wt., 6½ lbs. Capacity, 50 watts. Impedance, 8-16 ohms. 12" deep. Shpg. wt., 34½ lbs.
81 DZ 947. NET. 152.88

MODEL 6303 15" DIFFAXIAL. Excellent 3-way performance is achieved by using the diffusicone design and coaxially mounted, high-efficiency tweeter. Moderately priced, the 6303 is a fine choice for a custom home music system. Three reproducing elements (15" cone, Diffusicone element and super-tweeter, with new T-50 Hypersonic driver), provide brilliant high-fidelity sound. Frequency response, from 30 cps to beyond audibility.

Mechanical crossover at 1000 cps; electrical crossover network at 5000 cps. Includes brilliance control on 3-ft. cable with brass plate and knob. 2-lb. Alnico V permanent magnet. Power capacity, 30 watts. Impedance, 8-16 ohms. 15½" diameter; 10" deep. Shpg. wt., 12 lbs.

STYLUS FACTS: Magnetic cartridges are supplied with sapphire or diamond styli. Either will outlast the osmium stylus used in ordinary phonographs by many times. This is important, because a worn stylus will seriously damage your records, permanently distorting their sound. In the long run, diamond

styli are most economical. If sapphire styli are used, replace them at the first sign of wear. The diagram at left shows comparative wear of diamond and sapphire styli. It shows that diamond styli last far longer than sapphire styli; taken over a period of a year or so, the cost of diamond styli is considerably lower.

G.E. UPX-003B PREAMPLIFIER CONVERTS YOUR PHONO OR TV SET FOR USE WITH MAGNETIC CARTRIDGES.

Modernize Your Present
Phonograph with a
Webcor Changer and
Magnetic Cartridge!

If your TV set or radio has a phono input jack, you can easily convert it for use with a Webcor hi-fi Diskchanger and G.E. magnetic cartridge by adding a G.E. UPX-003B preamplifier. Just insert the shielded wire plug from the changer into the socket on the preamp provided for it; then plug the preamp into your radio or TV set in the same way. Connect changer and preamp to 110-volt, 60-cycle AC outlets, and you're all set! The combination will provide record reproduction vastly superior to older equipment; records will last longer, too, thanks to the light stylus pressure required by the G.E. cartridge. It's an excellent way to get started in hi-fi!

All necessary cords and plugs are supplied with the changer and the preamplifier; there's no soldering to be done. The preamp itself is easily hidden out of sight inside TV or radio cabinets, or behind them. In addition, the preamp may be used with a microphone, enabling you to "broadcast" through your radio or TV set. With instructions. Size, 3 $\frac{3}{4}$ x3 $\frac{1}{2}$ x1 $\frac{1}{4}$ ". JANSZEN ELECTROSTATIC TWEETER

F Impressive new, electrostatic high-frequency tweeter system. Includes power supply, crossover network, and four plastic radiating elements, all housed in a single hardwood cabinet. Extremely low harmonic and intermodulation distortion.

Unique electrostatic principle of operation completely eliminates the heavy paper cone of conventional speakers. In its place, a micro-thin plastic diaphragm, so low in mass as to be almost imaginary, is suspended between two parallel plates. This push-pull capacitance transducer replaces the ordinary vibrating mechanical system—since the flexible diaphragm is driven uniformly over its entire surface, there is no cone breakup and no uncontrolled excursion. Lack of high-frequency resonances greatly reduces apparent record scratch without attenuating highs.

Employs four separate radiators for vastly improved horizontal and vertical coverage through 120°. *Frequency Response*: 500 cps through 30,000 cps. *Power Handling Capacity*: Up to 60 watts. *Impedance*: 8 ohms. *Electrical Crossover Frequency*: 500 cps. Recommended for use with the Acoustic Research Model AR-1W Woofer System described above. Built-in high-pass filter prevents low frequencies from entering tweeter. Size: 7 $\frac{1}{4}$ x21 $\frac{1}{4}$ x12 $\frac{1}{4}$ ". Connects to 110-120 v., 60 cycle AC source. Shpg. wt., 16 lbs.

FACTS ABOUT TURNTABLES

The record player is the "origination point" for recorded disc music in your home. It converts mechanical energy into electrical energy (fed into an amplifier). Some high-fidelity enthusiasts prefer the manual professional-type turntable to the record changer. In order to enjoy the extra features of the turntable, many music lovers are willing to change records manually. The turntable features extremely quiet operation and excellent speed regulation. Rumble, or low-frequency noise, is practically eliminated.

The use of the turntable is particularly important for installations which have deluxe speaker systems with exceptionally good response to low notes. Professional turntables are usually supplied less pick-up arm and cartridge. A matching pick-up arm should be selected. Since turntable arms do not have to go through the changer cycle, they can be made for lower stylus pressure and longer record wear. Many deluxe installations use both a changer for convenience, and a turntable when the ultimate in performance is desired.

STYLUS PRESSURE GAUGES

Correct stylus pressure is necessary to assure fine reproduction and minimum stylus and record wear. Insufficient pressure will result in poor tracking, loss of bass response, and often cause the stylus to skip across the record. Excessive pressure will result in shortened stylus and record life, and loss of high-frequency response. The stylus pressure gauges below will allow quick, accurate adjustment for optimum performance.

"Plus-Play" Acetate Base

Within a short time of its release, Knight "Plus-Play" has become one of the most popular recording tapes in America. It's easy to see why—when you buy Knight "Plus-Play," you get superior tape quality, greatly extended playing time (by 50%) on each reel—plus genuine savings. Knight "Plus-Play" is uniformly red oxide-coated cellulose acetate, only $\frac{1}{2}$ as thick as standard tape. With no loss of recording quality, "Plus-Play" is wound 1800 feet to a 7-inch reel—50% more footage than conventional tape. Now you can record entire concerts, conferences or other events on a single reel of tape—at $3\frac{3}{4}$ " per second, you get as much as 3 hours of dual-track recording time.

QUALITY MAGNETIC RECORDING TAPES

New Mylar-Base "Plus-Play" Tape

An ideal combination of qualities: The exceptional toughness and break-resistance of the wonder-plastic, Mylar, plus the extra playing time of Knight "Plus-Play" recording tape—both offered at exceptional savings to you in the new Knight Mylar-base "Plus-Play". It is the most permanent medium yet developed for magnetic recording. Recording characteristics meet the most critical of professional recording requirements and include wide frequency response, extremely low noise level and excellent uniformity of oxide coating. Your cost is far below that of regular recording tapes, at no sacrifice in performance quality!

The remarkable dimensional stability of Mylar, together with its other physical properties, results in an extremely durable bond between oxide and base. The Mylar base is unharmed by heat, cold or humidity. Mylar makes Knight "Plus-Play" indisputably superior to ordinary recording tape; its price makes "Plus-Play" your greatest tape-recording value! Each reel factory-sealed in cellophane.

Standard-Play Plastic Base

Knight standard-play, plastic-base tape meets the most critical professional recording requirements, because rigid manufacturing controls protect its high quality. When you use it, you are assured of noise-free reproduction and exceptionally uniform output. The surface upon which the recording is made is precision-coated with pure red oxide, providing excellent high-frequency response and minimum abrasive action on recording heads. You can depend on the quality of Knight recording tape; its performance is easily comparable to other brands of regularly-priced recording tape. It is similar in every respect to tape used throughout the recording industry, and radio and TV work.

Easy to Order—Specify Department and Tube Type. This tabular presentation enables you to locate the tube types you want, quickly and easily. When ordering, give the *full* Stock Number, which consists of the Department Number and the Manufacturer's Type Number. The Department Number represents exact location of the tube in Allied stockrooms—speeds up your shipment. Give stock Number thus: E3-1B85. The chart at left shows the full names of the manufacturers whose tubes are listed on these pages. For technical literature, see page 105. You can depend on Allied for prompt shipment of all special purpose tubes.

NEW SILICON RECTIFIERS

Outstanding new development in the field of power conversion and semi-conductors. Especially useful for applications where rectifier

may be subjected to extremes of heat and cold—or where high power capacity in a small size unit is required. Thermal range from -55° C. to 100° C. without derating. Forward resistance less than one ohm, reverse resistance in the order of 1000 ohms—gives rectification efficiency greater than 99%. Terminals, Types L, M, and SM; fuse type; Type P; pigtail leads; Type Q; stud—1/4" 24 thread. Note: All DC current ratings are for resistive or inductive loads only except Type M (for capacitive loads also). On all other types derate DC current by 20% for capacitive, motor, or battery loads. Type Q current ratings based on proper heat sink design to limit heat of case to 170° F. *Peak inverse voltage. † At 100° C. Av. shpg. wt., 3 oz.

OHMITE TYPE AS MINIATURE POTENTIOMETERS

- Smallest Molded Composition Potentiometers
- Screwdriver Slotted
- No Rivets or Soldered Parts
- Made to Rigid Specifications
- Synthetic-Resin Sealed

New, linear-taper, miniature potentiometers combining exceptional reliability and extremely small size. Maximum continuous power rating is 0.5 watt. Only 1/2" in diameter—ideal for lightweight, miniaturized assemblies. Molded composition resistance and collector tracks (bridged by a molded composition brush) assure long life. Greater cross-section of resistor track lowers current density—gives excellent performance in excess of 50,000 operation cycles. Terminals are molded directly into control elements for trouble-free connections. Enclosures are sealed with synthetic resin to keep out dust, moisture and fungus. Terminals are goldplated for easy soldering, even after long storage. Have screwdriver-slotted, locking-type shafts. Rated at 350 v. 1/2" dia.; 1 1/4" long. Shaft, 1/8" long. Meet QQ-M-151, MIL-R-94A and IRTMA specifications. Types 3613, 3614 and 3615 have ±20% tolerance; others are ±10%. Shpg. wt., 2 oz.

IRC CONTROLS

TYPE LC-1 LOUDNESS CONTROL

Easily installed, loudness-type volume control. Permits complete listening pleasure during periods when amplifier volume must be kept low. Replaces conventional volume control in amplifier, radio or phono. Automatically compensates for reduced response of the ear to bass and treble frequencies at low volume. Audio output can be reduced to near whisper level and yet retain almost perfect tonal balance. Has input resistance of 5 megohms. Insertion loss is only 6 db. Space required behind panel: With switch 2 1/4", without switch, 1 1/4". With instructions, less AC switch (may be used with Type 76-1 or 76-2 switch, next column). Shpg. wt., 4 oz.

TV SIGNAL ATTENUATOR

Type QJ-3. Economically priced L-pad television signal attenuator. For use with sets having 300-ohm twin line antenna input. Minimizes interstation interference, definition loss and sound bars caused by excessive signal strength. Diminishes buzz or hum due to high signal level in intercarrier systems. Reduces overloading effects in strong signal area. In many cases, corrects or reduces horizontal or vertical flutters in picture; also picture and sound "break-over." Very useful device for the TV serviceman to simulate fringe-area signals when shop is located near powerful local station. A nearly constant 300-ohm load is maintained on antenna lead-in to minimize ghosts caused by mismatch of antenna lead to receiver. Easily mounted on cabinet or chassis. Slotted shaft for screwdriver adjustment. Supplied with mounting bracket and instructions. 7/8" diameter, 1" deep. Shaft: 1/4" diameter, 1/2" long. Shpg. wt., 3 oz.

INDUSTRIAL CONTROLS

PQ

RQ
RQL

M

These versatile industrial-type controls have a smooth carbon base element and "two-finger" wiper arm of thin, high-stress alloy—assures good contact and low noise for years of service. Type M multi-sections can easily be added to either PQ, RQ or RQL types; Permit exact "tailoring" of dual, triple and quadruple units to meet individual requirements. Special-purpose controls can be made up by using a Type PQ, RQ or RQL with several M multi-sections and a Type 76 switch (listed below). Types PQ, RQ and RQL have a 1/2" threaded bushing. Body diameter less terminals is 1 1/4" maximum; body diameter including terminals is 1 3/4" maximum; depth behind panel, 3/4". Each Type M multi-section adds 1/2" to depth. Type PQ, RQ, RQL and M sections feature 300 degree arc of rotation—with or without switch. Power rating is 1/2 watt, 500 volts maximum.

PQ types have a round fixed shaft, 3" long, 1/4" diameter. Shaft can be cut to any desired length with a hacksaw. Where a longer shaft is required, use the extension fittings on page 160. RQ and RQL types have a short shaft with a screwdriver slot for use where adjustment is semi-permanent; shaft extends 1/4" beyond threaded bushing. Types RQ, RQL are the same except RQL has split bushing and locking nut—for permanent, vibration-proof settings. Tolerance of all types is ±10%. All have terminals that are tinned for easy soldering and firmly riveted to the body of the control. Terminals may be bent for a variety of applications without causing noise in the circuit. Ground plate on Types PQ, RQ, and RQL has two locating tabs either one or both of which may be bent down if not needed. Av. shpg. wt., 4 oz.

Cornell-Dubilier Capacitors

TYPES UP AND UPE TWIST-PRONG ELECTROLYTICS

Compact capacitors, hermetically sealed in seamless aluminum cases. For use where high temperatures, voltage surges and ripple currents exist. Excellent for replacement use in television sets. Temperature range up to and including 475 work-

ing volts DC; +85°C; above this voltage: +65°C. All are UP types except *UPE types, which are designed for use in selenium rectifier circuits; have etched anode and cathode units to prevent capacity drop from high ripple and surge currents usually found in these circuits. Positive lugs on bakelite insulating base. Av. shpg. wt., 5 oz.

Mallory Capacitors

FP AND WP ELECTROLYTIC CAPACITORS

For use in filter circuits, audio by-pass circuits and TV applications. Capacitors feature complete stability under heavy ripple current, high surge voltages and high temperatures. Units are encased in compact, rubber-sealed aluminum cases. FP types have the exclusive Mallory Fabricated Plates—anodes specially constructed of metalized cotton gauze. WP types have

etched-plate anodes. Special internal design lowers RF impedance and permits a minimum of coupling between plates. Up to 150 WVDC. capacity tolerance is -10% to +100%. Above 150 WVDC, tolerance is -10% to +50%. Can is negative except *. Insulating washers supplied. For mounting hardware, see page 138. Av. shpg. wt., 6 oz.

SPRAGUE BULPLATE PRINTED CIRCUITS

The new, quality-constructed line of Sprague Bulplate printed circuits offers the radio-television serviceman a time-saving electronic aid. Each printed circuit unit consists of a self-contained, extremely compact "package" containing capacitors, resistors and, in certain units, inductance. With these units, there is no need to waste time on excessive wiring and unwiring operations or in tracing circuitry for faulty components—simply replace the entire circuit section with a Bulplate unit.

A moisture sealed, shock-resistant ceramic base firmly holds the printed circuit wiring and all components in place. Capacitors are rated at 500 v. DC, 1000 v. test, while the maximum voltage to be applied across the resistors is 250 v. DC, except D-1 where all elements are rated at 100 v. DC. Av. shpg. wt., 2 oz.

TYPE LS LINEAR STANDARD TRANSFORMERS

Type LS units fulfill the most critical specifications established for broadcast equipment. Each is guaranteed to meet or exceed the frequency response indicated. All have Hyper-All Alloy cores, plus multiple-section, inter-leaved windings in a semitoroidal coil structure. Special winding methods and insulations assure minimum leakage reactance and distributed capacitance. Minimum hum pickup is achieved by the use of a high-conductivity outer case and hum-balancing coil structure.

INTERSTAGE AUDIO TRANSFORMERS

Designed for coupling single plates to PP grids. LS-19: ± 1 db, 20-20,000 cps; relative hum, 50 db. LS-21: ± 1 db, 10-20,000 cps; relative hum, -74 db. Maximum level: +20 dbm. Primary impedance, 15,000 ohms; for coupling single plate to PP grids. LS-1 case.

RAYTHEON VOLTAGE REGULATORS

Stabilize Varying Line Voltages to Within $\pm 1/2\%$

Fully automatic magnetic-type AC line voltage stabilizers. For applications requiring accurate voltage stabilization. Maintain absolutely constant output of 115 volts, within $\pm 1/2\%$ despite input voltage fluctuations as great as 15%. Quick response corrects for fluctuations so rapidly that no indication can be noticed on an ordinary AC voltmeter. Can be used in parallel for greater power-handling capacity where load is greater than rated capacity of single unit. Requires no adjustment. *Case has flat top instead of style illustrated. †In 2 sections, mounted as single unit. For 95-130 v., 60 cycle AC. Available in ratings to 2000 watts on special order.

RF Chokes—Transistor IF's and Coils

POPULAR RF CHOKES FOR EVERY PURPOSE

Chokes below may be used in transmitters, receivers, test equipment, etc. 71 H 160 is recommended for transmitters with plate supply of up to 3,000 volts modulated or 4,000 volts unmodulated. It may be used on all bands from 80 through 10 meters. R-33 series chokes are two-section; R-50 series chokes are 3 and 4-section. 71 H 149 choke is hermetically sealed in glass. National suffix "U" following type number indicates removable stand-off insulator at

one end. National chokes wound on insulant forms; Meissner, on specially treated dowels, except "iron-core type." †Shielded. The four highest frequency Ohmite chokes are wound on low power factor plastic cores; the other three units are wound on steatite tubes. Millen and National current ratings are maximum ma. ‡Mounted on standoff insulator for vertical mounting. §Millihenries. **Microhenries. Av. shpg. wt., 2 oz.

MALLORY AUTO NOISE SUPPRESSORS

These ruggedly built capacitors are designed to prevent interference with radio reception caused by generators, vibrators, switches and other spark-producing devices within the auto, marine or aircraft equipment. All units are wax impregnated. AG types are well protected from moisture, but are not hermetically sealed. AS types are enclosed in metal cases with screw terminals and hermetically sealed—provide low RF impedance, recommended for extreme climate conditions. Both AG and AS types are designed for noise suppression use on generators, ammeters, and many other types of electrical equipment where there is contact spark or noise radiation.

Type AG442 also used in midjet aircraft motors. Type AG453 has shielded lead. Types FM441 and FM442 for Ford generators. Type AM454 for ammeter and gauges—has waxed-paper case, can be held in place with Mallory TH-17 clip (see Page 138). Types RF480 and RF481 used for vibrator hash and general noise suppression (have very low RF impedance)—both have waxed-paper case. Type RF481 requires Mallory TH-19 mounting clip (see Page 138). CA275X, hermetically sealed bathtub type is used for general noise suppression in marine and aircraft equipment. Av. shpg. wt., 3 oz.

MULTI-CONTACT PLUGS AND SOCKETS

Versatile, shielded connectors with 11, 15 and 20 contacts. Two-types—cable and chassis. May be combined for "pull-out" rack mounting, inter-connecting several units, and extending conductors. Mica-filled phenolic plastic has high impact strength, low loss and low shrinkage. Non-rotating contacts are silver-plated with .00002" hard gold shell. Plating gives improved appearance, makes soldering easier and faster—no pre-tinning of solder cups is required. All have eyelets inserted in mounting holes for added strength, and interlocking barriers to prevent accidental shorting. Rated at 900 v., 60 cycles, A.C. *Insert only; all others with can. Cable type, 4 oz., chassis type, 2 oz.

Amphenol Connectors

BLUE RIBBON CONNECTORS

Amphenol Type 26 Blue Ribbon connectors for heavy-duty operation. Provide an excellent solution to multi-circuit connection, switching and re-routing problems. Unique, self-cleaning spring contacts maintain continuity even under conditions of severe vibration. Do not require visual alignment—ideal for use in hidden, hard-to-reach locations. Positive polarization prevents mismatching of connectors. Feature low insertion and withdrawal force, but provide exceptionally firm, positive contact. Exclusive spring-tension contacts are heavily silver base plated and gold finished; will not tarnish or corrode. Plug contacts are supported

their full length on the dielectric. Dielectric configuration makes it impossible to overstress or fatigue contacts and individual protective barrier between each spring member insures proper spacing. Bodies are diallyl phthalate blue dielectric and meet government specifications. Have high insulation resistance and stability. Mounting plates are made of corrosion-resistant stainless steel and are molded into the body. 4301 Series has end cable outlet; 4501 Series has side cable outlet. S in Type No. Indicates socket contacts; P indicates plug contacts. For wire size up to No. 16. Rated 5 amperes at 600 v., DC. Av. shpg. wt., 5 oz.

AGASTAT TIME DELAY RELAYS

Precision time-delay relays. Provide adjustable delays—down to 1/10th second, or delays up to 5 minutes, varied by outside screw adjustment on timing head. For vertical operation only. Consist of sealed timing head, solenoid assembly, snap-action switch with fine silver contacts, and screw terminals. Contact ratings based on 115 v., 60 cycle resistive loads. *DB suffix indicates double-break type with 15 amp contact rating; SB indicates single-break, with 8 amp rating. "Use" column numbers mean that delay starts when (1) coil is energized, (2) coil is de-energized, (3) lever is released manually, (4) coil is energized and de-energized, (5) delay starts on main contacts when coil is energized, but no delay on auxiliary SPDT contacts; main contacts transfer at end of time delay. (6) Instant transfer on main and aux. contacts when energized. Instant retransfer on aux.; adjustable time delay on main when de-energized. (7) Depressing lever starts time delay, after which contacts are automatically energized. Contacts reset to normal when lever is released. NED-13 is double-head type for adjustable delay in both directions. NEL-11QT is remote push-button type with hold-in switch. All relays listed may be mounted from front or back. NET relays provide 2-step delay; first delay period from 0 to 15 sec.—2nd period from .01 sec. to 5 min. NET-15Q, NET-16Q, NET-25Q and NET-26Q consist of standard Agastat plus SPDT aux. switch at bottom of terminal block. NEU-11QT is U.L. Approved. Types G, GV and GZ are general-purpose enclosures similar to NEMA Type 1; GV for NEL-11QT. GZ for NET and G for all others. Coil voltages are 50-60 cycle, AC. Av. size, 2 1/2 x 2 1/4 x 1 1/4", except 1 1/2 x 2 1/2 x 1 1/4". Av. shpg. wt., 2 1/4 lbs.

BARBER-COLMAN TYPE "O" ULTRA-SENSITIVE RELAYS

Ultra-sensitive, DC-polarized relays. Feature extremely high sensitivity. Ideal for use wherever power supply is limited. Will operate for years with mercury cells. Widely used in plate circuits. High-speed response; can be operated in excess of 100 cps. Fine silver contacts are SPDT, with floating neutral position. Polarity of signal determines which contact closes. Sensitivity is adjustable for precise setting. Two Alnico magnets are used for polarizing field.

Balanced armature is mounted on torsional supports in air gap, assuring high resistance to physical shock. Normal tolerance on pull-in current at 75° F. is ±25%; from -65° to +160° F., ±60%. All have octal plug-in bases for chassis installation. 1 1/8 x 3 1/4 x 1 1/4". Shpg. wt., 10 oz.

Industrial Time Switches

INDUSTRIAL TIMER CORPORATION

SERIES CM CAM RECYCLING TIMERS

Motor driven timers specifically designed for repeating a definite electrical Off-On cycle continuously. A complete timer unit consists of a Series CM chassis-mount foundation unit, heavy-duty synchronous motor, cam activated single-pole double-throw switch, and a gear and rack assembly. The gear and rack assembly determines the overall time of one full Off-On cycle. The CM-4 will provide overall time cycles of from 40 seconds to 6 minutes, depending on which gear and rack assembly it is used with. Cams have single screw adjustment for setting "On" or "Off" cycle up to 98% of complete time cycle. Synchronous motor assures precise repetition of time cycle under continuous, industrial use. All gear and rack assemblies in the listing below are of standard construction to permit changing overall time cycle simply by changing the gear and rack assembly. The SPDT switch is totally enclosed and dust-proof. Contacts are rated 10 amps at 115 v., or 220 v. non-inductive. Size, 2 1/4 x 2 1/4 x 3 1/4". For operation from 110-120 v., 60 cycle AC.

TO ORDER: Locate overall time cycle desired in the table below and order both the gear and rack assembly and the CM foundation unit indicated. Av. shpg. wt., complete, 4 lbs.

Centered on the ebony-and-aluminum control panel is an easy-to-read slide rule scale; stations are located by the self-illuminated neon glow pointer, as it moves across the scale with jewel-like orange brilliance.

FM SPECIFICATIONS: Sensitivity: 2.5 μ v for 20 db quieting. Hum and Noise: —60 db. IF Bandwidth: 200 kc at 50% down on curve. Frequency Response: ± 0.5 db, 20-20,000 cps. MODEL 1100-K RESISTANCE SUBSTITUTION BOX KIT

A handy, versatile, time-saving instrument with a wide variety of applications. Helps to determine the value of an unmarked or illegible resistor. With a circuit in operation, resistance values can be changed to give optimum performance. In servicing or development, several Model 1100's give the flexibility needed to change circuit values quickly. Easy to use—simply disconnect one end of the resistor in question, and attach the substitution box with test leads. The best resistance value can then be selected by adjusting the box. This value of resistance can then be wired into the circuit. Resistance range from 15 ohms to 10 megohms in decade multiples of 15, 22, 33, 47, 68 and 100 ohms. 36 RETMA 1-watt 10% resistors. 5-way jack-top binding posts for connecting any type test leads. SPECIFICATIONS. Accuracy, within 2% of full scale. DC meters have D'Arsonval moving coil movements. AC meters have double, iron repulsion-type movements. Jeweled bearings and hardened alloy steel pivots. Metal dial faces, finished in white enamel, will not warp, crack or discolor under normal conditions. Have molded zero-adjusters and cushioned ceramic pointer stops.

All parts are heat-treated to eliminate strains and stresses, and to assure accurate alignment. Rigidity and alignment of bearing supports provide protection against vibrations. Steel parts are rustproofed. Black bakelite cases. Av. shpg. wt., 1 1/2 lbs. When ordering include Range and Model No. of meter. *Indicates overall depth but does not include terminals.

"Deluxe" LX Series

"Superb" L Series

EXCEPTIONAL FLEXIBILITY. Many accessories permit almost any type of installation: "Deluxe" series may be remotely controlled with accessory and has anti-feedback control, an exclusive Bogen feature. All units have plug-in sockets for low-impedance transformers; pencil-in identification strips for gain controls; constant-voltage output taps for use with 70.7-volt transformers.

"DELUXE" 30 AND 60-WATT FLEX-PAK AMPLIFIERS

These are the two brilliant leaders of Bogen's new "Flex-Pak" series: a distinguished group of units that bring new versatility and electronic refinements to the P.A. field. Incorporated in the "Deluxe" amplifiers are such features as anti-feedback control, constant-voltage output taps, four independently controlled microphone channels (one convertible to phono) and built-in circuitry for adaptation to remote control of gain at distances up to 2,000 feet. The anti-feedback control minimizes feedback noise without compromising tone or reducing gain. Constant-voltage output taps eliminate calculations to determine correct line-to-voice coil transformers. The circuitry is modern; screen regulation in the output stage provides higher power with greater efficiency; controlled positive feedback provides high output with minimum distortion. Handsome case is finished in black and gray. Handy identification strips above each gain control may be marked in pencil; they are easily erased when the set-up is changed.

Frequency Response: ± 1.5 db, 20-20,000 cps. **Hum Level:** 60 db below rated output. **Controls:** 4—Gain; Mic.-Phono switch; 2—Speech Filters; Off-On-Treble; Bass; Anti-Feedback. **Size:** $5\frac{1}{2} \times 16\frac{1}{4} \times 13\frac{1}{2}$ ". EXCEPTIONAL QUALITY. Controlled positive feedback, plus screen regulation for higher output at lower distortion levels; XL-311 Cannon microphone connectors used throughout; new functional modern styling; easy attachment of accessories without tools; correct compensation for use with phono cartridges; speech filters for highest clarity.

"SUPERB" 30 AND 60-WATT FLEX-PAK AMPLIFIERS

The two amplifiers of the "Superb" group are ideal for high-quality P.A. work requiring unusual flexibility and excellent performance at moderate cost. They include many of the outstanding features of the "Deluxe" amplifiers at the left, and provide three independently controlled microphone channels, one of which is convertible to phono. Controlled positive feedback, screen regulation in the output stage, and constant-voltage output taps are also provided. The handsomely designed cases of these amplifiers are black and gray; control panel markings are in red and black. A convenient leather carrying handle, easily removed, is attached to the side of the case with thumbscrews. No tools are needed for maintenance of Flex-pak amplifiers; the cage-type cover can be quickly removed after four thumbscrews are loosened. Pencil-in, erase-out labels are permanently bonded to the amplifier control panels above each gain control. The phono input is equalized for all types of cartridges.

Frequency Response: ± 2 db, 20-20,000 cps. **Hum Level:** 60 db below rated output. **Controls:** 3—Gain; Mic.-Phono switch; Speech Filter; Off-On-Treble; Bass. **Size:** 60-watt, $5\frac{1}{2} \times 16\frac{1}{4} \times 13\frac{1}{2}$ "; 30-watt, $5\frac{1}{2} \times 14\frac{1}{4} \times 13\frac{1}{2}$ ". HOW TO SELECT YOUR "CHIEF" SYSTEM

It's easy—and economical—to select an intercom system when you follow suggestions by Allied's experienced intercom experts:

- 1.) Determine how many locations the system will serve. Select "Chief" master stations with capacity to handle all locations.
- 2.) Select a "Chief" Master for each location that must call every other station.
- 3.) Choose a Sub for each location that must answer or call Masters only. (Subs cannot talk to other Sub-stations.)
- 4.) There must be at least 1 Master in every system (only Masters have amplifiers and distribute audio power to the entire intercom system).
- 5.) Use a "Redi-Power" Master when you need extra power for noisy locations.

MASTER-SELECTIVE SYSTEMS

Ideal choice for a completely centralized intercom system—these Master-Selective systems provide efficient, low-cost intercommunication between a single Master and up to 10 Subs. *Only one Master station can be used in this system.* Master can select a single Sub at a time, for private conversation, or call all Subs simultaneously. Any Sub can call the Master, but cannot talk to other Subs. (See functional diagram.) System cuts out sounds from Subs when not in use, yet Subs can still call Master. Connection can be "non-private" to permit persons at Subs to answer from 50 ft. away, or "private" to require operation of Sub's Talk-Listen switch. Subs can be located as far as 2000 ft. from Master and are not connected to power line.

Standard Masters provide adequate volume for systems in average locations. For noisy locations, select High-Output Masters and Subs. All stations are supplied in attractive walnut color bakelite cabinets; size, 8¼x6¼x7¼" except LR-3M and AR-3M Subs in brown, rectangular metal cabinets, 7x5¼x3½". Metal cabinets may be wall-mounted. Ship. wts.: Masters, 7 lbs.; all bakelite Subs, 5 lbs.; all metal Subs, 3 lbs.

Select Your TV Antenna From Allied's Complete Top-Quality Lines

Allied carries the world's largest stocks of TV antennas and accessories. On this and the following pages (through page 390), you'll find a complete selection of antennas for every use—indoor or outdoor installation, VHF and UHF, metropolitan, suburban or remotest fringe area use—all providing equally fine reception for color and black-and-white television receivers. Complete selections from nationally-known manufacturers, at lowest prevailing market prices, assure you of full value.

WHEN SHOULD A TV ANTENNA BE REPLACED?

Often, poor picture quality is not the fault of the TV set, but of a weather-worn antenna. For this reason, antennas exposed to weather for an appreciable length of time should be considered for replacement. A new antenna, of latest design, often provides picture quality superior to the original. Depend on Allied for the best replacement antenna.

How to Select Your TV Antenna

Today, most VHF TV broadcasts (channels 2 through 13) can be received at distances up to 200 miles when the proper antenna is used. While antennas of many sizes and shapes are available, each can be classified in one of the 4 general groups listed below. To assist you in selecting an antenna for your particular location, the antennas on this page and the following pages have been identified with 1, 2, 3, or 4 stars to indicate their useful range as given below. When in doubt, select an antenna in the next higher group.

- ★ Metropolitan-Suburban (up to 35 miles).
- ★★ Semi-Fringe (up to 50 miles).
- ★★★ Fringe (up to 75 miles).
- ★★★★ Deep-Fringe (up to 200 miles).

Stacking two of the same type antennas will give up to 50% more signal strength. Stacking is recommended in installations located over 100 miles from the TV station. Obstructions such as tall buildings or hills near your location may necessitate stacking at distances less than 100 miles. *All of the TV antennas in this Catalog may be used for reception of black-and-white or color TV broadcasts.*

MILLER HIGH-FIDELITY AM TUBELESS TUNER

Model 565. Unique tubeless, high-fidelity AM tuner kit. Provides outstanding broadcast reception at an unusually low price. Tuned radio frequency (TRF) type circuit offers a response that is limited only by the audio system used and the quality of the transmitted signal. The circuit uses no tubes and no operating power is required. Designed for use with any high-fidelity amplifier, or TV audio section. Smooth-tuning dial covers frequencies from 550 to 1700 kc. The output cable of the tuner is equipped with a standard pin plug for direct connection to any standard, amplifier input jack.

The tuner is fundamentally a germanium diode detector employing two tuned circuits. Negative mutual coupling is employed between the antenna circuit and the RF circuit for exceptionally high efficiency. The audio output voltage of the tuner is directly proportional to the input signal. Output voltage ranges from .07 to .7 volts on stations within a 25-mile radius (depending upon the signal strength of the transmitting station). Output is equipped with a volume level control to permit adjusting the output voltage level to that required by the amplifier being used. With all parts, wire, hardware, cabinet, and easy-to-follow instructions. Cabinet is ebony bakelite with brass front panel. Size: 4x7x3 1/4". Wt., 2 lbs.

If you use your own order forms or stationery, please give our stock number, quantity desired, name of item, manufacturer's type number and price. "Z" ITEMS SHIPPED BY EXPRESS

The letter "Z" in our stock numbers (as in 98 SZ 767) identifies items which are fragile or which exceed parcel post size or weight limits. To insure safe arrival, such items are shipped by express or the best low-cost method. See Parcel Post and Express information at right.

HOW TO SEND MONEY

The best way to send money is by postoffice or express money order, bank draft or check. Avoid sending coin or currency, but if necessary, be sure to register your letter. Please do not remit in stamps except if necessary on very small orders. For rush handling, telegraph your order and money.

ABOUT C.O.D. ORDERS

You will save money by sending cash in full with your orders. On parcel post C.O.D. shipments, the Postoffice charges a C.O.D. collection fee and also a money order fee for forwarding the C.O.D. amount to us (This is in addition to regular postage; see C.O.D. fee and money order tables below.) Similar fees are collected on express and freight C.O.D. shipments. It will pay you to remit in full and save the C.O.D. charges. We will refund every penny not used. If a C.O.D. shipment is unavoidable, your order should be for a minimum of \$5.00, with a deposit of at least 20%. Please include full remittance with any orders for less than \$5.00.

EXPRESS: Please remit full amount for merchandise, **but do not send any money for express charges with your order.** All transportation charges are collected on delivery at no extra cost to you. All "Z" items (see column at left) are shipped by express. In addition, to assure safe arrival, we prefer to ship by express many hi-fi units, communications equipment, sound systems, transmitting and TV tubes, recorders, test units, and other fragile merchandise. If there is no express agent at your location, be sure to specify your nearest express office. Express rates include insurance.
